What changed over the period

Seven-day average daily impressions

The good and the weak

POSITIVE

Average position improved from about 62 in the first 30 days to about 39 in the last 32 days. The homepage earned 21 of 27 clicks.

LIMITING FACTOR

Most service-page impressions are for results far down the rankings. At those positions, a low click rate is expected.

Interpretation

Visibility is growing, but broad service searches have not yet turned into traffic. The priority is improving the ranking and usefulness of the pages that already earn impressions.

Source: Chart.csv, Pages.csv, Filters.csv. Positions are averages, not a fixed rank.

WHERE CLICKS ARE LOST

Two pages dominate exposure.

Page-level impressions and clicks from the same export

Highest-impression pages

Roof replacement — 7,410 impressions — 0 clicks

Avg position 52.5 | CTR 0%

Emergency roofing — 2,542 impressions — 1 clicks

Avg position 46.0 | CTR 0.04%

Homepage — 967 impressions — 21 clicks

Avg position 10.1 | CTR 2.17%

Commercial roofing — 552 impressions — 3 clicks

Avg position 48.7 | CTR 0.54%

Queries explain the gap

commercial roof replacement	5,265 impr.	Pos. 49.0	0 clicks
industrial roof replacement	672 impr.	Pos. 58.8	0 clicks
emergency roof repair commercial	431 impr.	Pos. 59.7	0 clicks

Technical check: URL versions

The export lists both extensionless and .html versions of several services. Inspect Google-selected canonicals, redirects, sitemap entries and internal links. The export alone does not prove duplicate indexing.

Source: Pages.csv and Queries.csv. Query rows are not a complete site total.

PRIORITY PLAN

Turn exposure into qualified clicks.

Practical actions, ordered by likely value and dependency

1

Confirm one URL per service

Use Search Console URL Inspection on each URL pair. Choose one canonical URL, redirect the alternate version, and align sitemap and internal links.

Technical clarity; verify before changing.

2

Strengthen roof replacement

Add original Houston project photos and details: building type, system, size, challenge, work completed and result. Explain cost drivers, repair vs. replacement, timeline and disruption.

Targets 7,410 page impressions and the 5,265-impression query.

3

Strengthen emergency roofing

Show real emergency jobs and service-area evidence. State how to request help, what happens after the call, and realistic response expectations.

Targets 2,542 page impressions.

4

Link and substantiate

Link to these pages from homepage, commercial roofing, project and relevant location pages. Add genuine supplier, partner, trade and local citations where relationships exist.

Helps discovery and demonstrates credibility.

5

Improve snippets after rankings rise

Write distinct, accurate title and description text for each service page. Compare CTR for queries that reach positions 1-10; do not judge snippets by position-50 CTR.

Converts stronger rankings into clicks.

How to measure progress

Every two weeks, filter Search Console to United States and compare each target query + page: impressions, clicks, average position and CTR. Watch for movement toward top-20 positions first, then improve titles if top-10 CTR remains weak.

Method and limitations

This is Search Console web-search data, not sales or lead data. Average positions mix locations and devices. No conversion tracking, backlink audit or live URL Inspection results were supplied.
